

# Pediatric Trauma Resuscitation: *From Scene to Pediatric ICU*

## **Pediatric Trauma Resuscitation: *From Scene to Pediatric ICU***

More children die from trauma than all other causes combined. To optimize care and survival, trauma systems must utilize a comprehensive approach to provide the highest quality of coordinated pediatric trauma care in the region.

As Suffolk County's only Level-I Pediatric Trauma Center, and only one of two pediatric trauma centers in the county, Stony Brook University Trauma Center recognizes the crucial role that Emergency Medical Services plays in the *Trauma Chain of Survival* and as part of the entire trauma system.

Please join our Pediatric Trauma Center panel for this engaging presentation, which will review the trauma systems approach to care of the pediatric trauma patient. Discussion will focus on preparation for pediatric trauma, CDC guidelines and pediatric-specific protocols, pediatric patient assessment, and review of actual pediatric trauma cases.

We look forward to seeing you there!
